

WebWoRxSolution

Many Solutions- One Source Being able to get everything you need from one place saves you a tremendous amount of time. We deliver the latest and greatest technology at an affordable price. We provide the summit of quality in website design, e-commerce solutions, hosting technologies and all the various supporting details necessary for a web-based presence.

Our philosophy consists of developing and implementing a strategic website plan for each client that focuses on key areas:

E-Commerce Development, Web Based Business Solutions (CRM, ERP, BPM etc.), Open-source development, Content Management(CMS) Based Dynamic Web Design, Data-base Development, VPN, Call-centre, Out Sourcing support, Web Hosting and SEO/SEM.

Ecommerce and Web Based Business Process Development: We take the time to understand each client's business and establish clear and reasonable goals and objectives for creating an impressive and effective Internet solution for the organization. From non-profit agencies to corporate powerhouses, our staff develops an Internet Business Plan that is uniquely suited to the goals to be attained by their web presence. We customize web based business solutions such as ERP, CRM etc to fit an organization's exact needs and make it operational and accessible by their employees, vendors and clients from every corner of the globe by harnessing the power of internet cost effectively.

Web Technology:

Providing the technologies that allows clients to keep their website information accurate and current helps to meet and exceed the goals set forth in the Internet Business Plan. We use the latest programming technology to ensure interaction and functionality with its users while providing easy manageability of the site as it grows. We apply the appropriate level of technology to accomplish your goals and to capitalize on the ever changing features of the Web.

OPEN SOURCE DEVELOPMENT

We are committed to Open Source Development community, most of our custom software development are release under major Open Source Licencing (GNU, GPL, MPL) scheme, thus making our products more cost effective for our customers.

MISSION STATEMENT

The Web has gone through a series of changes throughout its years. This has caused many websites to be left dust as their competitors have advanced.

We design websites and develop the back ends that support their continued evolution. We guarantee that you will receive a well-designed, powerful website that will keep people coming back.

Establish relationships with companies to design, develop, and deploy Internet strategies that create an unfair advantage, command market leadership, and deliver long-term value. We accomplish our mission repeatedly and we build trusting relationships with our clients. That trust becomes the foundation for client growth, calculated risks, further investment, greater returns, and lasting relationships.

- To bring high-quality, low-cost, professional web deployment, both through providing this service to local businesses and individuals, and by servicing organizations worldwide from our base of operations here.
- To provide low-cost web presence to local non-profit and community service organizations.
- To assist these organizations in leveraging the proven power of the Internet to help attract new business and improve existing customer service and sales infrastructure.
- To ensure the highest level of customer satisfaction through regular follow-up, customer surveys and helping customers to understand the many ways in which they can leverage their Internet presence to increase sales opportunities.
